Rudder blades/rudders 358 & 360

The profile shape of the 358 series rudders varies from the 360 series.

The way they are finished before use is the same. Remove the flange at the leading edge by rounding off. The flange at the trailing edge is removed by sharpening and then a 0.5 mm wide square trailing edge is formed by cutting off the sharp edge.

Bond the stock in place using epoxy resin and seal the top taking care not to distort the section shape.
